## ***CO-OP***

***Advantages to partnering  
with Solartech Powers'  
Co-Op Plan***

- Commercial and residential PV system design
- Solar project management services
- Developing Requests for Proposals (RFP's)
- Assistance with financial options and arrangements.
- Assistance with paperwork for rebate program.
- Utility paperwork
- Equipment sales/service
- Solar equipment kits for new construction and retrofit products
- Building permit coordination
- Rebate and utility programs tracking and administration

Solar energy systems are safe and quiet; they are also warranted for 25 years with minimal maintenance. Solar power is clean renewable and unlimited.

## ***PRODUCTS***

***Solar Modules***

25 year manufacture warranty of Solar PV panels

***Inverters***

Call for warranty information for different manufacturers

***Mounting***

10 years limited Product Warranty

## KEY TO SUCCESS

- **Keep it simple.**  
Complexity lowers reliability and increases the need for technical support and maintenance.
- **Understand system availability.** Using solar to reduce your highest tier electricity consumption and choosing a time use rate for greater savings.
- **Know what hardware is available and at what cost.** It is wisest to install solar panels with the lowest cost per watt, rather than the highest output per square foot.
- **Know the installation site before designing the system.** A site visit is essential for component placement, wire runs, shading, terrain peculiarities and special requirements
- **Plan periodic maintenance.** Panels may need cleaning in dirty locations and batteries need replacing every 5-10 years.
- **Perform a thorough economic analysis.** Calculate the return on investment.

## OFF-GRID

- **5 TO 130 WATT PANELS**
- **CHARGE CONTROLLERS**
- **BATTERIES**
- **CUSTOM DESIGNS ARE WELCOME FOR REMOTE LOCATION APPLICATIONS**
